DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

According to the guidelines in Section (f)(i)(a) of Annex B of the PCT Administrative Instructions, the special technical feature as defined by PCT Rule 13.2 shall be considered to be met when all the alternatives of a Markush-group are of similar nature. For chemical alternatives, such as the claimed siRNA molecules comprising distinct SEQ ID NOs, the Markush group shall be regarded as being of similar nature when

(A) all alternatives have a common property or activity and

(B)(1) a common structure is present, i.e, a significant structure is shared by all of the alternatives or

(B)(2) in cases where the common structure cannot be the unifying criteria, all alternatives belong to an art recognized class of compounds in the art to which the invention pertains.

The instant SEQ ID NOs:1,2,3,4,6,7,8, and 9 are considered to be each separate invention for the following reasons:

Art Unit: 1635

The SEQ ID NOs do not meet the criteria of (A), common property or activity or (B)(1), common structure or (B)(2), art recognized class of compounds. Although all SEQ ID NOs are disclosed as potential antitumor agents, they behave in different ways with differing inhibitory effects as evidenced by the instant specification describing differing inhibitory effects between SEQ ID NO:3 (livin-1) and SEQ ID NO:4 (livin-2). Accordingly, each member of the class cannot be substituted one for the other, with the expectation that the same intended result would be achieved.

Further, although the siRNA molecules comprising SEQ ID NOs:1,2,3,4,6,7,8, and 9 disclosed in the claims may be used in cancer therapy, they do not meet the criteria of (B)(1), as they do not share, one with another, a common core structure. It is clear that each SEQ ID NO disclosed in the instant application comprises distinct nucleic acids as evidenced by the instant specification and sequence listing. Accordingly, unity of invention between the SEQ ID NOs is lacking and each SEQ ID NO claimed is considered to constitute a special technical feature.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1635

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Applicant is advised to reply with an election of a single SEQ ID NO to be examined.
